Energy is only required to change the display. This is very useful in applications where the amount of available energy is limited. In this article we describe a practical application of such a display and control it with an Arduino/Elektor Uno. Original publication: Elektor Magazine 6/2016 (November & December) on page 74

Add one (or all, separate multiple URLs with commas) of the URLs above to the edit box "Additional Boards Manager URLs" (Arduino IDE 1.6.6 or higher, or 1.8.x, not 1.7.x). Open the IDE's Boards Manager: Tools -> Board -> Boards Manager As Type (upper left corner) select Contributed. You should now see at least one entry for Elektor boards.

Elektor's SDR-Shield is a versatile shortwave receiver up to 30 MHz. Using an Arduino and the appropriate software, radio stations, morse signals, SSB stations, and digital signals can be received. In this book, successful author and enthusiastic radio amateur, Burkhard Kainka describes the modern practice of software defined radio using the ...

Good news for all audio enthusiasts: we are proud to present yet

another all-analog circuit developed entirely in house. Despite the simple design of this audio power amp with just one pair of transistors in the output stage, Q-Watt can deliver over 200 quality watts into 4 ohms with exceptionally low distortion thanks to the use of a special audio driver IC.
