$2\text{AgNO}_3 + \text{BaCl}_2 \rightarrow \text{Ba}(\text{NO}_3)_2 + 2\text{AgCl}$. The data from the first weeks lab showed that these compounds would form a white precipitate, the data from week two's lab agreed. The chemical equation supports this because AgNO_3 and $\text{Na}_2\text{S}_2\text{O}_3$ would combine to form a grainy yellow precipitate $\text{Ag}_2\text{S}_2\text{O}_3$.

Give bottle 1 to both mice, 2, 3 to the first mouse, and 4, 5 to the second mouse. If both mice die on the first day, then the poisoned bottle was bottle 1. If one mouse dies, then the poisoned bottle is one of the bottles given to that mouse. So test the remaining two bottles (either 2, 3 or 4, 5) with the other mouse by giving it a sip of one of them.

Copyright 2007 Hal Harris. The Nine-Bottle Challenge. Name _____. Background: Almost all salts ("salt" is a name for an ionic compound) exist in water solutions as separated ions. For example, a solution of sodium chloride contains Na^+ ions and Cl^- ions, and no NaCl species. When solutions of different salts are mixed, the ionic species present may remain in solution as separate entities [i.e. no reaction occurs], may combine to form a precipitate, or may react chemically to ...

The Notorious Nine Bottle Problem Many ionic compounds dissolve in water. When an ionic compound dissolves in water, the cation and anion of the solid are separated into aqueous ions (abbreviated as the state aq). This physical process is called solvation and results when polar water molecules are able to solvate (surround) each ion and

Chemistry 128L: General Chemistry II

to solve the problem A B D C E The 9 dot puzzle is an old puzzle. It appears in Sam Loyd's 1914 puzzle book. It is a very well known problem used by many psychologists to explain the mechanism of 'unblocking' the mind in problem solving activities. It is probable that this brainteaser gave origin to the expression 'thinking outside the box'.
