The eighth edition has been updated and improved—featuring a new chapter on securitization and the credit crisis, and increased discussion on the way commodity prices are modeled and commodity derivatives valued. Provide the right balance: Mathematical Sophistication.

### Hull, Options, Futures, and Other Derivatives | Pearson

The current nine-month futures price is \$8 per ounce, the exercise price of the options is \$8, the risk-free interest rate is 12% per annum, and the volatility of silver is 18% per annum. The delta of a European futures call option is usually defined as the rate of change of the option price with respect to the futures price (not the spot price).

The value of the European option is 5.394. This can also be calculated by working back through the tree as shown in Figure S12.8. The second number at each node is the value of the European option. Early exercise at node C would give 9.0 which is less than 13.2449. The option should therefore not be exercised early if it is American. Figure S12.8
