**The Role of Management Information Systems in Decision Making**  
The role of management information systems (MIS) in decision making is to generate data that is useful to management as they consider strategy, staffing, teams, marketing and more. Choosing what data MIS tracks as well as how management uses this data in decision making can make or break the direction of a company in the competitive marketplace.

**The Role of Management Information Systems in Decision Making**  
This is the case of ideal, rational decision making. However, when decision makers work under some pressure they may need to settle for a choice that is good enough rather than perfect. Even more of deviation from rational decision making happens when decision making is performed over prolonged periods without delivering a clear decision.
