B. D. Guenther. Electromagnetic theory, Maxwell's equations, and Poynting's theorem are used to derive the following properties of light waves: (1) the wave nature of light; (2) the fact that light is a transverse wave; (3) the velocity of light in terms of fundamental electromagnetic properties of materials; (4) the relative magnitude of the electric and magnetic fields and relationships between the two fields; and finally (5) the energy associated with a light wave.
