Solids, Liquids, and Gases. All things on Earth consist of matter, and matter exists in many forms. The most common states of matter are solids, liquids, and gases. This unit addresses how matter can change from one state to another. Matter in each state has identifiable properties. The unit also explains that when matter combines, a mixture ...

### Solids, Liquids and Gases Lesson Plan for 3rd Grade ...

Third graders describe the three phases of matter. In this activity on matter, 3rd graders explore the differences between solids, liquids and gases. This activity briefly explores what happens when matter changes from one phase to another with the melting of ice.

### Solids, Liquids and Gases Lesson Plan for 3rd Grade ...

They don` t have a definite shape and take the shape of the container just like liquids. Due to low densities of gases, as compared to those of liquids and solids, the gases bubble through liquids and tend to rise up. Gases can diffuse and effuse. This property is negligible in solids but operates in liquids as well.

To a rough approximation, liquids are about 100 times more viscous than gases. There are three important properties of the viscosity of dilute gases that seem to defy common sense. All can be explained, however, by the kinetic theory (see below Kinetic theory of gases). The first property is the lack of a dependence on pressure or density.
