Solar simulators provide the closest spectral match to the solar spectrum available from any source. While not exact, the match is better than needed for most applications. Figure 4 shows the optics of a typical solar simulator. The Xenon arc lamp at the heart of the device has a small, high radiance arc that allows efficient beam collimation ...

A solar simulator (also artificial sun) is a device that provides illumination approximating natural sunlight. The purpose of the solar simulator is to provide a controllable indoor test facility under laboratory conditions, used for the testing of solar cells, sun screen, plastics, and other materials and devices.

Our state of the art single output Solar Simulators produce Class A Air Mass 1.5 Emission Spectrum to accurately replicate full spectrum sunlight, with 1 sun output intensity. They can also be quickly and easily configured by the user to provide UVA only, UVB only, UVA+B, or custom spectra optionally.
