Solutions to Linear Systems The analysis of linear systems will begin by determining the possibilities for the solutions. Despite the fact that the system can contain any number of equations, each of which can involve any number of unknowns, the result that describes the possible number of solutions to a linear system is simple and definitive.

Step 1. Interchange equation (2) and equation (3) so that the two equations with three variables will line up. $x + y + z = 12,000$ $3x + 4y + 7z = 67,000$ $-y + z = 4,000$. Step 2. Multiply equation (1) by -3 and add to equation (2). Write the result as row 2. $x + y + z = 12,000$ $y + 4z = 31,000$ $-y + z = 4,000$.

In mathematics, a system of linear equations (or linear system) is a collection of one or more linear equations involving the same set of variables. For example, $+ - = - + = - - + - =$ is a system of three equations in the three variables x, y, z . A solution to a linear system is an assignment of values to the variables such that all the equations are simultaneously satisfied.
