Spectrophotometric Analysis Of Nitrates

A spectrophotometric procedure for determination of nitrate in water, soil extracts, and a variety of other sample types is described using one reagent solution which is easily prepared and stored. Sample and equipment requirements are minimal. Reduced chemical hazard, simplicity, and versatility represent improvements over existing methods.

Spectrophotometric Determination of Nitrite S. T. SULAIMAN AND D. AMIN Department of Chemistry, College of Science, Mosul University, Mosul, Iraq Received October 6, 1982 INTRODUCTION Nitrite ion plays an important role as a precursor in the formation of *N*-nitrosamines, many of which have been shown to be potent carcinogens (3, 5), and when correlated with other nitrogen forms in water, can provide an index for organic pollution.

Spectrophotometric determination of nitrite

A simple, rapid spectrophotometric method for the determination of nitrite and nitrate in water, tablets and water samples have been developed. Determination of nitrite is based on the reactions involving sulfanilic acid with methyl anthranilate as the coupling agents and determination of nitrate is based on their reduction to nitrite in the presence of Zn/NaCl.

Abstract. Abstract. A new flow injection analysis (FIA) method has been developed for determination of nitrites, nitrates, and their mixtures, based on the reaction of nitrites with rivanol (2-ethoxy-6,9-diaminoacridinium lactate) in HCl medium; the concentration of the diazonium salt formed is evaluated spectrophotometrically ($\lambda = 520$ nm). Flow-through determination of nitrates can be carried out by using the same reaction following prior reduction in a flow-through reductor filled with ...
