Artificial Intelligence and Machine Learning are much trending and also confused terms nowadays. Machine Learning (ML) is a subset of Artificial Intelligence. ML is a science of designing and applying algorithms that are able to learn things from past cases. If some behaviour exists in past, then you may predict if or it can happen again.

Artificial Intelligence and Machine learning made simple

One of them is artificial intelligence and this book explains in a simple and understandable manner how to do it. There are lots of practical examples in the book so it is easy to follow, but I would recommend at least some of the basic knowledge of Ruby before starting with this book.

Artificial Intelligence (AI) Definition

Sunday night's episode of "60 Minutes" profiled venture capitalist Kai-Fu Lee's work on artificial intelligence (AI) in China, specifically a facial recognition software that can read and learn basic emotions. Lee explained how artificial intelligence is formed: Computers are programmed to take in massive amounts of data and then learn to make decisions based on that information.

Great! Easy to use and user-friendly interface made it straightforward for a non-tech person like me to use. The results were not 100% accurate but it transcribed interviews pretty well. I am surprised how accurate the software is with different accents. It is so productive to use a tool like this.
