Determine algebraically whether $f(x) = 2x^3 - 3x^2 - 4x + 4$ is even, odd, or neither. This function is the sum of the previous two functions. But, while the sum of an odd and an even number is an odd number, I cannot conclude the same of the sum of an odd and an even function.

Even and Odd Functions | Purplemath

You choose which you prefer even when the choices are not so good, such as smelly or slimy. One way to play this game is the following: the person pulls out his two terms and selects one of those terms that are better suited to her not speaking about it out loud. Other competitors have to guess that term chosen by the opponent.
